Professional Summary

Passionate Full Stack MERN Developer with extensive experience in architecting and deploying scalable web applications, real-time systems, and SaaS platforms. Expert in building high-performance desktop applications via Electron.js and designing business automation solutions. Proven track record in developing enterprise-grade platforms, including omni-channel communication hubs, CRM systems, and real-time reporting dashboards. Skilled in modern frontend architectures, secure authentication (JWT), and real-time data synchronization using Socket.io. Currently focused on integrating AI orchestration and automation workflows into enterprise backend environments.

Technical Skills

- **Frontend:** HTML5, CSS3, JavaScript (ES6+), React.js, Redux Toolkit, Tailwind CSS, Bootstrap, Responsive Web Design, Axios, Vite.
- **Backend:** Node.js, Express.js, REST API Development, JWT Authentication, Socket.io, MVC Architecture, Role-Based Access Control (RBAC).
- **Database:** MongoDB (Mongoose), MySQL, SQLite.
- **Desktop & Real-Time:** Electron.js, Thermal Printer Hardware Integration, Real-Time Systems Architecture.

Professional Experience

Full Stack Developer (Team Lead) | BlackstoneAI

Aug 2025 – Present (10 mos) | Remote

- Spearheaded a remote development team, focusing on the architecture and deployment of scalable web applications using the MERN stack.
- Contributed to advanced backend development, laying groundwork for future AI orchestration and complex automation workflows within the platform.

- Managed the end-to-end development lifecycle, ensuring adherence to coding standards, performance optimization, and clean UI/UX implementation.

Full-stack Developer (Team Leader) | Least Action

Mar 2025 – Aug 2025 (6 mos) | Vellore, Tamil Nadu, India

- Led a MERN-stack development team, overseeing the design and delivery of high-traffic service booking platforms and specialized cab booking applications.
- Architected scalable application backend services, integrated real-time features using Socket.io for live updates, and utilized AWS for deployment.
- Managed role-based access control (RBAC) systems across multi-tier applications (Admin, Employee, User apps).

Back End Developer (Internship) | ParkQwik

Dec 2024 - Feb 2025 (3 mos) | Remote

- Focused on implementing scalable and efficient server-side applications, contributing high-quality code to improve system performance and reliability.
- Applied Core Java and Node.js skills in designing and optimizing RESTful APIs for data management and integrity.

Freelance Full Stack Web Developer | Leodhra

Jan 2024 – Dec 2024 (1 yr) | Tamil Nadu, India (Self-employed)

- Developed comprehensive business management solutions, including billing, inventory, and CRM systems, using MongoDB and Mongoose ODM.
- Managed the full development cycle for diverse client projects, focusing on responsive UI/UX implementation and API development for business automation.

Key Projects

Note: Several projects detailed below were developed as internal business solutions and are subject to non-disclosure agreements (NDAs). Focus is placed on production-level technical implementation and architectural impact.

SaaS Omni-Channel Communication & Support Platform

- Architected a multi-tenant SaaS application integrating various communication streams into a unified dashboard.
- Implemented real-time support systems using Socket.io to facilitate instantaneous customer-agent interaction.
- Developed a WhatsApp notification system for automated business alerts and customer engagement.

Automotive & Service Management Ecosystem

- Engineered a comprehensive Mechanic Workshop Management System featuring inventory tracking and service logging.
- Built a Service Booking Platform and a specialized Cab Booking Application with real-time availability tracking.
- Designed scalable backend services to handle concurrent booking requests and complex state management.

Business Automation & Management Solutions

- Developed robust Billing and Inventory Systems featuring role-based admin and employee access tiers.
- Created CRM and customer engagement platforms to streamline lead management and reporting.
- Designed high-performance reporting dashboards to visualize business KPIs and inventory levels.

Desktop Application Development (Electron.js)

- Developed cross-platform desktop applications tailored for offline-first business operations.
- Integrated hardware-level Thermal Printer support for seamless point-of-sale (POS) billing workflows.

Tools & Technologies

- **Version Control:** Git, GitHub.
- **Development Tools:** VS Code, Postman.
- **Deployment & Cloud:** Netlify, AWS Basics.
- **Design:** Figma Basics.

Currently Learning

- **Advanced Frameworks:** Next.js for server-side rendering and performance optimization.
- **Backend Languages:** Golang and Spring Boot for high-concurrency enterprise services.
- **AI & Automation:** AI Orchestration, Large Language Model (LLM) integration, and complex automation workflows.
- **Computer Science Foundations:** Advanced System Design, Data Structures, and Algorithms (DSA).

Education

- Master of Computer Applications (MCA) - Bharathidasan University (Currently Pursuing)
- Bachelor of Business Administration (BBA) - RVS CAS, Sullur

Certifications

- **Full Stack MERN Development Certification - GUVI**
